Profile Discussion

- Summary of ABIGAIL information regarding improving quantitation to be incorporated into the Profile.
- Other topics discussed:
 - Calibration device limits regarding screening parameters
 - Claim language specifically referring to variability
 - Definition of slice thickness
 - Dependent on the vendor, the scanned object's isocenter, 100mm out
 - Dr. Judy to provide a standard definition based on COPD community consensus
 - Vendor Platform
 - Goal to encourage manufacturer innovation to meet compliance
- Mr. Avila will incorporate discussion points into the Profile
- Discussions to continue via e-mail
- Edited Profile will be circulated to the working group for further comments and will be discussed on the next t-con.
- Goal to complete Profile edits by mid-October.
- Circulate the Profile to members of the Nelson study, chest radiologists and those who are unable to attend bi-weekly t-cons.
- Mature to be ready for the October 26th workshop prior to the International Association for the Study of Lung Cancer Conference.
- The next t-con will be **Thursday, September 19th at 3 PM (CDT)**
