Summary Document
Overview ..... 8
Frequency Tables. ..... 8
These tables show how many cases are considered for each participant in this study as well asfrequency of each lesion factor within each participant reading.Tables of Percent Error Means, Overall and by Factors9
The mean percent errors and absolute percent errors, as calculated by R , are displayed in tableformat for each participant.Tables of Percent Error Standard Deviations, Overall and by Factors10
The standard deviations of percent error and absolute percent error, as calculated by R, aredisplayed in table format for each participant.Tables of Percent Error Means for Significance Group Clusters.11
The mean percent errors and absolute percent errors are calculated for clusters determined by participants displaying similar percent errors, and these values are displayed here in table format.Table of Percent Error Means for Each Individual Characteristic.12
The mean percent errors are displayed in table format for each participant at each possible characteristic for each factor.
Table of Percent Error Means for Each Individual Characteristic by Cluster. ..... 12
The mean percent errors are displayed in table format for each cluster of similar participants at each possible characteristic for each factor.
Table of Percent Error Means for Each Individual Characteristic by Method13
The mean percent errors are displayed in table format for the two options of reading method (either fully or semi-automatic) at each possible characteristic for each factor.
Table of Percent Error Standard Deviations for Each Individual Characteristic.
The standard deviations of percent errors are displayed in table format for each participant at each possible characteristic for each factor.
Table of Percent Error Standard Deviations for Each Individual Characteristic by Cluster14
The standard deviations of percent errors are displayed in table format for each cluster of similar participants at each possible characteristic for each factor.
Table of Percent Error Standard Deviations for Each Individual Characteristic by Method ................... 14
The standard deviations of percent errors are displayed in table format for the two options of reading method (either fully or semi-automatic) at each possible characteristic for each factor. CT Profiles.
CT Profile Excluding 5mm and -630HU, Tables of Means ..................................................................... 15
The mean percent errors and absolute percent errors, as calculated by R , are displayed in table format for each participant as before, except that here all data of slice thickness 5 mm and of intensity -630 HU are ignored from the data set.

The standard deviations of percent errors and absolute percent errors, as calculated by R , are displayed in table format for each participant as before, except that here all data of slice thickness 5 mm and of intensity -630 HU are ignored from the data set.

CT Profile Excluding 5mm and -630 HU and 8 mm , Percent Error Means17

The mean percent errors and absolute percent errors, as calculated by R , are displayed in table format for each participant as before, except that here all data of slice thickness 5 mm , of intensity -630 HU , and of size 8 mm are ignored from the data set.

CT Profile Excluding 5mm and -630HU and 8mm, Percent Error Standard Deviations 18

The standard deviations of percent errors and absolute percent errors, as calculated by R, are displayed in table format for each participant as before, except that here all data of slice thickness 5 mm , of intensity -630 HU , and of size 8 mm are ignored from the data set. Radial Plots for Percent Error Means.19
Percent Error Means for all Participants, Overall and by Factor ..... 19

Radial plot of the mean percent errors for each participant.
Percent Error for all Participants without Reference20

Radial plot of the mean percent errors for each participant except for the Reference.
Percent Error Means for Clusters, Overall and by Factor.21

ANOVA is used to cluster participants into groups of relatively similar mean percent errors. This section shows the ANOVA results as well as the radial plot obtained when splitting the participants into these clusters and then plotting the mean for each cluster.

CT Profile Excluding 5mm and -630HU Percent Error Plot23

Radial plot of the mean percent errors for each participant when data from thickness 5 mm and intensity -630 HU are ignored.

CT Profile Excluding 5mm and -630HU and 8mm Percent Error Plot.24

Radial plot of the mean percent errors for each participant when data from thickness 5 mm , intensity -630 HU, and size 8 mm are ignored.

Absolute Percent Error Means for all Participants................................................................................... 25
Radial plot of the mean absolute percent errors for each participant.
Absolute Percent Error Means for all Participants except Reference26

Radial plot of the mean absolute percent errors for each participant except for the Reference.
Absolute Percent Error Means for Clusters
ANOVA is used to cluster participants into groups of relatively similar mean absolute percent errors. This section shows the ANOVA results as well as the radial plot obtained when splitting the participants into these clusters and then plotting the mean for each cluster.
CT Profile Excluding 5mm and -630HU Absolute Percent Error Plot ..... 29
Radial plot of the mean absolute percent errors for each participant when data from thickness 5mm and intensity - 630 HU are ignored.
CT Profile Excluding 5mm and -630HU and 8mm Absolute Percent Error Plot ..... 30Radial plot of the mean absolute percent errors for each participant when data from thickness 5mm , intensity -630 HU , and size 8 mm are ignored.Radial Plots for Percent Error Standard Deviations31
Percent Error Standard Deviation for all Participants. ..... 31Radial plot of the percent errors standard deviations for each participant.Percent Error Standard Deviations for all Participants without Reference.32
Radial plot of the percent errors standard deviations for each participant except for theReference.
Absolute Percent Error Standard Deviation for all Participants ..... 33Radial plot of the absolute percent errors standard deviations for each participant.Absolute Percent Error Standard Deviations for all Participants without Reference.34
Radial plot of the absolute percent errors standard deviations for each participant except for theReference.
CT Profile Excluding 5mm and -630HU Percent Error and Absolute Percent Error Standard Deviation Plots. ..... 35
Radial plot of the percent error and absolute percent error standard deviations for eachparticipant when data from thickness 5 mm and intensity - 630 HU are ignored.CT Profile Excluding 5mm, -630HU, and 8mm Percent Error and Absolute Percent Error StandardDeviation Plots36Radial plot of the percent error and absolute percent error standard deviations for eachparticipant when data from thickness 5 mm , intensity -630 HU , and size 8 mm are ignored.Radial Plots of All Factors Individually37
Percent Error Means for Each Individual Factor in All Participants except Reference ..... 37
Radial plot of the mean percent error for each possible factor (factor groups are not averaged here) for each participant except Reference.Percent Error Means for Each Individual Factor Split into the Three Clusters38
Radial plot of the mean percent error for each possible factor (factor groups are not averaged here) for each cluster of participants that had been found to exhibit similar mean percent errors.
Percent Error Means for Each Individual Factor Split into the Reading Method Type39
Radial plot of the mean percent error for each possible factor (factor groups are not averaged here) for two cluster of participants determined by the reading method of the participant: either fully automatic or semi-automatic.

Radial plot of the percent error standard deviations for each possible factor (factor groups are not averaged here) for each participant except Reference.

$$
\begin{aligned}
& \text { Percent Error Standard Deviations for Each Individual Factor in all Participants Excluding Reference } \\
& \text { and Group05A ..................................................................................................................................................................................... }
\end{aligned}
$$

Radial plot of the percent error standard deviations for each possible factor (factor groups are not averaged here) for each participant except Reference and Group05A, since Group05A had such large standard deviations compared to the other participants.

Percent Error Standard Deviations for Each Individual Factor Split into the Three Clusters.................... 42
Radial plot of the percent error standard deviations for each possible factor (factor groups are not averaged here) for each cluster of participants that had been found to exhibit similar mean percent errors.

Percent Error Standard Deviations for Each Individual Factor Split into the Reading Method Type . 43

Radial plot of the percent error standard deviations for each possible factor (factor groups are not averaged here) for two cluster of participants determined by the reading method of the participant: either fully automatic or semi-automatic.
Spearman Correlations
The Spearman correlations between the percent error readings for each lesion of each series were calculated between each pair of participants (for a total of 66 pairs). At first the correlations were found for overall data, and then also for each factor among series, shape, size, and density.
Box-Plots
Box Plots for the Percent Error for all Participants .................................................................................. 46
The percent error readings for each participant are presented in box-plot form side-by-side.
Comparing Each Individual Participant with Combination of the Non-Reference Participants. 48

Each participant's percentage error readings are presented in a box-plot beside the box-plot of the readings from all participants that are not the Reference.

Box-Plots by Each Factor for Each Participant .
Each participant's percentage error readings are split according to the factors to display the differences within factors in box-plot format. These plots are overlaid with the plots produced from all participants together excluding the Reference.

## Overview

## Frequency Tables

| Analysis <br> Participant | Biomarker | Number of <br> members | Method <br> Class | Method Type |
| :--- | :--- | :--- | :--- | :--- |
| Reference | V | 97 | NA | NA |
| Group01A | V | 97 | 6 | Semi-automatic |
|  | R | $97^{*}$ | 1 | Fully automatic |
| Group02A | V | $194^{* *}$ | 1 | Fully automatic |
| Group03A | V | 97 | 1 | $?$ |
| Group04A | V | 97 |  | Semi-automatic |
| Group05A | V | 97 | 1 | Fully automatic |
| Group06A | V | 97 |  | Fully automatic |
| Group07A | V | 97 | 3 | Semi-automatic |
| Group08A | V | 97 |  | $?$ |
| Group09A | V | 97 | 1 | Semi-automatic |
| Group10A | V | 97 | 1 | Fully automatic |
| Group11A | V | 97 | 1 | Fully automatic |
| Group12A | V | 97 |  | $?$ |

*Only the Volume biomarker (V) was considered in this analysis, meaning that 97 of the values from Group01A were ignored so the total number of members considered from Group01A is 97.
${ }^{* *}$ Group02A has repeated readings (one repeat for each case). In the analysis shown here, the repeats
were ignored, so the number of members actually considered for Group02A is 97.
Frequency Table within each Participant:

| Parameter | Value | Frequency |
| :---: | :--- | :--- |
| Shape | Spherical | 35 |
|  | Elliptical | 25 |
|  | Lobulated | 27 |
|  | Spiculated | 10 |
| Density (HU) | -630 | 34 |
|  | -10 | 30 |
|  | 100 | 33 |
|  | 5 | 44 |
|  | 0.8 | 53 |
| Size (mm) | 8 | 6 |
|  | 10 | 32 |
|  | 20 | 11 |
|  | 40 |  |

Notes on this data-set:

1. Of the lesions used that are spiculated, only 1 does not have an intensity of -630 HU (lesion \#5).
2. The highest average volume read-out value for an intensity of -630 HU is ranked as follows:
a. Group 05 - the average read-out is $4316 \mathrm{~mm}^{3}$
b. Group 10 - the average read-out is $3265 \mathrm{~mm}^{3}$
c. Group 06 - the average read-out is $3084 \mathrm{~mm}^{3}$
d. All other participants are $<3000 \mathrm{~mm}^{3}$, most around 2500

## Tables of Percent Error Means for Significance Group Clusters

The participants were split into three clusters based on similarity of percent error means, and the average percent error for each factor group is calculated.
Note: Cluster A is Participants 01, 05, 10, and 12. Cluster B is Participants 03, 06, and 09. Cluster C is Participants 02, 04, 07, 08, and 11.

|  | Pooled \% <br> Error Mean | Pooled \% <br> Error <br> Variance | Size Mean <br> \% Error | Shape <br> Mean \% <br> Error | Density <br> Mean \% <br> Error | Slice <br> Thickness <br> Mean \% <br> Error |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Group A | 8.39 | 1165.27 | 9.25 | 6.61 | 8.37 | 8.66 |
| Group B | -2.06 | 166.68 | 1.29 | -3.99 | -1.88 | -1.98 |
| Group C | -8.98 | 199.82 | -6.69 | -11.98 | -8.69 | -8.96 |
| Grp Average | -1.46 | 513.35 | 0.62 | -3.79 | -1.30 | -1.34 |
| Grp Average + sd | 6.94 | $*$ | 9.39 | 5.24 | 6.99 | 7.16 |
| Grp Average - sd | -9.86 | $*$ | -8.16 | -12.81 | -9.59 | -9.85 |

Visual representation of this data as well as ANOVA used to determine these clusters can be found here.
The participants were split into two clusters based on similarity of absolute percent error means.
Note: Cluster A is Participants $01,05,07,08,10$, and 12 . Cluster B is $02,03,04,06,09$, and 11.

|  | Pooled <br> Absolute \% <br> Error Mean | Pooled <br> Absolute \% <br> Error <br> Variance | Size Mean <br> Absolute \% <br> Error | Shape <br> Mean <br> Absolute \% <br> Error | Density <br> Mean <br> Absolute \% <br> Error | Slice <br> Thickness <br> Mean <br> Absolute \% <br> Error |

## Radial Plots for Percent Error Means

## Percent Error Means for all Participants, Overall and by Factor

The table containing this data in number form can be found here.

## Percent Error for all Participants without Reference

The average value for all 12 participants is shown by the solid red polygon. The dotted polygons mark the mean $\pm$ sd values. Note, in the plot, the group average marking squares are empty rather than filled in to distinguish between them and the individual participant points.

Percent Errors without Reference Compared with Mean

The table containing this data in number form can be found here.

## Percent Error Means for Clusters, Overall and by Factor

With the visual aid of this plot in addition to running ANOVA, the 12 Participants can be divided into clusters of similar Percent Errors:

Transformation for Normality of linear model: $(\text { Bias }+79)^{0.4}$
Coefficients:
(Intercept)
as.factor(True.Shape)lobulated
as.factor(True.Shape)spherical
as.factor(True.Shape)spiculated

| -0.51764 | 0.07820 | -6.619 | $5.54 \mathrm{e}-11^{* * *}$ |
| -0.16958 | 0.07820 | -2.168 | $0.030326^{*}$ |
| -0.26243 | 0.07820 | -3.356 | $0.000818^{* * *}$ |
| -0.48712 | 0.07820 | -6.229 | $6.59 \mathrm{e}-10^{* * *}$ |
| -0.70304 | 0.07820 | -8.990 | $<2 \mathrm{e}-16^{* * *}$ |
| -0.25390 | 0.07820 | -3.247 | $0.001201^{* *}$ |
| 0.13646 | 0.07820 | 1.745 | 0.081263. |
| -0.35610 | 0.07820 | -4.554 | $5.84 \mathrm{e}-06^{* * *}$ |
| -0.08255 | 0.07820 | -1.056 | 0.291401 |

MSE $=0.297$
Residual degrees of freedom $=1143$

To determine similar Percent Errors, the p-values shown in the above table were compared. Each value here is the comparison between Group01 with each of the listed participants. Participants with p-value compared to 01 of over 0.01 were placed in Cluster A, participants with the $p$-value ranging 0.0005-0.01 were placed in Cluster $B$, and the participants with $p$-value compared to 01 of less than 0.0005 were placed in Cluster C.

Cluster A: 1, 5, 10, 12
Cluster B: 3, 6, 9
Cluster C: 2, 4, 7, 8, 11
Differences between these clusters were compared using a contrast to test if the mean \% error for each cluster is equal to that of each other cluster:

| Clusters compared | p-value |
| :--- | :--- |
| $A$ and $B$ | $<0.001$ |
| $A$ and $C$ | $<0.001$ |
| $B$ and $C$ | $<0.001$ |

So, even with Bonferroni correction ( $\alpha_{c}=0.05 / 3=0.017$ ), we see that these clusters are significantly different.
P-value obtained from a Kruskall-Wallis test of the three sets of untransformed means: 0.008
So there is still strong evidence that the clusters are not all the same

The following plot shows these three cluster averages and overlays the overall participant average $\pm$ one standard deviation.

## Percent Errors by Cluster with Average

For reference:
Cluster A: 1, 5, 10, 12
Cluster B: 3, 6, 9
Cluster C: 2, 4, 7, 8, 11

The table containing this data in number form can be found here.

## CT Profile Excluding 5mm and -630HU Percent Error Plot

Plotting only thickness of 0.8 mm and density of -10 HU or 100 HU (not -630 HU):
Percent Errors for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## CT Profile Excluding 5mm and -630HU and 8mm Percent Error Plot

Plotting only thickness of 0.8 mm and no density of -630 HU or size of 8 mm :
Percent Errors for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## Absolute Percent Error Means for all Participants

The table containing this data in number form can be found here.

## Absolute Percent Error Means for all Participants except Reference

## Absolute Percent Errors without Reference Compared with Mean

The average value for all 12 participants is shown by the solid red polygon and unfilled markers. The dotted polygons mark the mean $\pm$ sd values.
The table containing this data in number form can be found here.

## Absolute Percent Error Means for Clusters

With the visual aid of this plot in addition to running ANOVA, the 12 Participants can be divided into clusters of similar Absolute Percent Errors:

Transformation for normality of linear model: (AbsoluteBias) ${ }^{0.25}$
Coefficients:

|  | Estimate | Std. Error | tvalue | Pr(>\|t|) |
| :--- | :---: | :--- | :--- | :--- |
| (Intercept) | 2.29973 | 0.07530 | 30.542 | $<2 \mathrm{e}-16^{* * *}$ |
| as.factor(True.Shape)lobulated | 0.04645 | 0.03205 | 1.449 | 0.147575 |

| as.factor(AnalysisSWModel)Group03A_PILOT | -0.38433 | 0.05703 | -6.739 | $2.52 \mathrm{e}-11^{* * *}$ |
| as.factor(AnalysisSWModel)Group04A_PILOT | -0.32432 | 0.05703 | -5.687 | $1.64 \mathrm{e}-08^{* * *}$ |
| as.factor(AnalysisSWModel)Group05A_PILOT | 0.07593 | 0.05703 | 1.331 | 0.183311 |
| as.factor(AnalysisSWModel)Group06A_PILOT | -0.22148 | 0.05703 | -3.884 | $0.000109{ }^{* * *}$ |
| as.factor(AnalysisSWModel)Group07A_PILOT | 0.02857 | 0.05703 | 0.501 | 0.616441 |
| as.factor(AnalysisSWModel)Group08A_PILOT | 0.07670 | 0.05703 | 1.345 | 0.178913 |
| as.factor(AnalysisSWModel)Group09A_PILOT | -0.27187 | 0.05703 | -4.767 | $2.11 \mathrm{e}-06^{* * *}$ |
| as.factor(AnalysisSWModel)Group10A_PILOT | -0.02725 | 0.05703 | -0.478 | 0.632893 |
| as.factor(AnalysisSWModel)Group11A_PILOT | -0.29919 | 0.05703 | -5.247 | $1.85 \mathrm{e}-077^{* * *}$ |
| as.factor(AnalysisSWModel)Group12A_PILOT | -0.03341 | 0.05703 | -0.586 | 0.558068 |

MSE $=0.158$
Residual Degrees of Freedom $=1143$

To determine similar Absolute Percent Errors, the p-values shown in the above table were compared. Each value here is the comparison between Group01 with each of the listed participants. Participants with p-value compared to 01 of over 0.01 were placed in Cluster $A$, and participants of less than 0.01 were placed in Cluster B.

Cluster A: 1, 5, 7, 8, 10, 12
Cluster B: 2, 3, 4, 6, 9, 11
Differences between these clusters were compared using a contrast to test if the mean \% error for each cluster is equal to that of each other cluster:

| Clusters compared | $p$-value |
| :--- | :--- |
| $A$ and $B$ | $<0.001$ |

P-value obtained from a Wilcoxon test of just the two, untransformed, sets of cluster means: 0.002
P-value obtained from a Kruskall-Wallis test of just the two, untransformed, means: 0.004

So, we see that these clusters are significantly different.

The following plot shows these two cluster averages and overlays the overall participant average $\pm$ one standard deviation.

## Absolute Percent Errors by Cluster with Average

For reference:
Cluster A: 1, 5, 7, 8, 10, 12
Cluster B: 2, 3, 4, 6, 9, 11

The table containing this data in number form can be found here.

## CT Profile Excluding 5mm and -630HU Absolute Percent Error Plot

Plotting only thickness of 0.8 mm and density of -10 HU or 100 HU (so not -630 HU):
Absolute Percent Errors for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## CT Profile Excluding 5mm and -630HU and 8mm Absolute Percent Error Plot

Plotting only thickness of 0.8 mm and no density of -630 HU or size of 8 mm :
Absolute Percent Errors for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## Radial Plots for Percent Error Standard Deviations

Note: for the factors, the SD shown is the average of the SD's for each factor.

## Percent Error Standard Deviation for all Participants

The table containing this data in number form can be found here.

## Percent Error Standard Deviations for all Participants without Reference

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar SD values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## Absolute Percent Error Standard Deviation for all Participants

The table containing this data in number form can be found here.

## Absolute Percent Error Standard Deviations for all Participants without Reference

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar SD values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## CT Profile Excluding 5mm and -630HU Percent Error and Absolute Percent Error Standard Deviation Plots

The SD plots when only 0.8 mm thickness is considered and -630 HU density is excluded
Percent Error SDs for Each Factor, Group Average Shown in Solid Line

Absolute Percent Error SDs for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.
Note: Group02 and Group11 present very similar values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## CT Profile Excluding 5mm, -630HU, and 8mm Percent Error and Absolute Percent Error Standard Deviation Plots

The SD plots when only 0.8 mm thickness is considered and -630 HU density and 8 mm size is excluded Percent Error SDs for Each Factor, Group Average Shown in Solid Line

Absolute Percent Error SDs for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.
Note: Group02 and Group11 present very similar values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## Radial Plots of All Factors Individually

To depict how the 12 participants vary in each Factor, the following show the mean and sd of each participant for each factor. The solid red lines are the combined data of all 12 participants.

## Percent Error Means for Each Individual Factor in All Participants except Reference

Percent Errors for Each Factor, Group Average Shown in Solid Line

The table containing this data in number form can be found here.

## Percent Error Means for Each Individual Factor Split into the Three Clusters

Split into clusters A, B, and C:

## Percent Errors for Each Factor for Each Group Cluster, Group Average Shown in Solid Line

The table containing this data in number form can be found here.

For reference:
Cluster A: 1, 5, 10, 12
Cluster B: 3, 6, 9
Cluster C: 2, 4, 7, 8, 11

## Percent Error Means for Each Individual Factor Split into the Reading Method Type

Splitting the participants according to the method type employed, either fully or semi automatic:

## Percent Errors for Each Factor for Each Method Type, Group Average Shown in Solid Line

Fully Automatic: Group 02, Group 03, Group 05, Group 06, Group 09, Group 10, Group 11
Semi Automatic: Group 01, Group 04, Group 07, Group 08, Group 12
The table containing this data in number form can be found here.

## Percent Error Standard Deviations for Each Individual Factor in all Participants Excluding Reference

The table containing this data in number form can be found here.

Since Group 05 seems really bad in this plot right above, the following plot was also made, excluding both the reference and group 05 .

## Percent Error Standard Deviations for Each Individual Factor in all Participants Excluding Reference and Group05A

## SD Percent Errors, Group 05 Ignored, and Average in Solid Line

The table containing this data in number form can be found here.

Note: Group02 and Group11 present very similar SD values, and as such overlap in the radial plot. Since Group11 is plotted after Group02, it is the markers of Group11 that are visible and not Group02, though they should be at the same location roughly.

## Percent Error Standard Deviations for Each Individual Factor Split into the Three Clusters

Split into clusters $A, B$, and $C$ and including Group 05:
SD Percent Errors for Each Factor for Each Group Cluster, Group Average shown in a Solid Line

The table containing this data in number form can be found here.

For reference:
Cluster A: 1, 5, 10, 12
Cluster B: 3, 6, 9
Cluster C: 2, 4, 7, 8, 11

## Percent Error Standard Deviations for Each Individual Factor Split into the Reading Method Type

Splitting the participants according to the method type employed:
SD Percent Errors for Each Factor by Method, Group Average shown in a Solid Line

Fully Automatic: Group 02, Group 03, Group 05, Group 06, Group 09, Group 10, Group 11
Semi Automatic: Group 01, Group 04, Group 07, Group 08, Group 12
The table containing this data in number form can be found here.

## Spearman Correlations

The Spearman correlations between the percent error readings for each lesion of each series were calculated between each pair of participants. At first the correlations were found for overall data, and then also for each factor among series, shape, size, and density.
The following box-plot shows the information for each set of 66 correlations:
(Note: Series03 only has 2 lesions, so the correlation has very little meaning there)
(Note2: the red dotted lines indicate where different factor sections begin, so it separates the series plots from the shape plots from the size plots from the density plots)

And here are plots of the same correlations, except oriented vertically.

## Box-Plots

## Box Plots for the Percent Error for all Participants

The thicker dotted lines represent $\pm 15 \%$, and the smaller dotted lines show the location of $\pm 30 \%$.

The thicker dotted lines represent $15 \%$, and the smaller dotted lines show the location of $30 \%$.

Comparing Each Individual Participant with Combination of the NonReference Participants

Percent Error in Group01A vs All Other Groups (no Reference)

Percent Error in Group02A vs All Other Groups (no Reference)

Percent Error in Group03A vs All Other Groups (no Reference)

Percent Error in Group04A vs All Other Groups (no Reference)

Percent Error in Group05A vs All Other Groups (no Reference)

Percent Error in Group06A vs All Other Groups (no Reference)

Percent Error in Group07A vs All Other Groups (no Reference)

Percent Error in Group08A vs All Other Groups (no Reference)

Percent Error in Group09A vs All Other Groups (no Reference)

Percent Error in Group10A vs All Other Groups (no Reference)

Percent Error in Group11A vs All Other Groups (no Reference)

Percent Error in Group12A vs All Other Groups (no Reference)

## Box-Plots by Each Factor for Each Participant

Box Plots for the Reference by each Factor

NOTE: For all following box-plots, the red dotted-line plots are the plots of the data from all Analysis Participants combined, excluding the Reference.

Box Plots for the Group01A by each Factor

\% Error for Group01A by Shape

\% Error for Group01A by Slice Thickness

\% Error for Group02A by Shape

\% Error for Group02A by Slice Thickness

Box Plots for the Group04A by each Factor

\% Error for Group04A by Shape

\% Error for Group04A by Slice Thickness

Box Plots for the Group05A by each Factor

Box Plots for the Group09A by each Factor

Box Plots for the Group10A by each Factor

\% Error for Group11A by Shape

\% Error for Group11A by Slice Thickness

Box Plots for the Group12A by each Factor
