RSNA:

Joe Koudelik
Madeleine McCoy

QIBA Vol-CT AdvDisease v2 Public Comment Profile Feedback Working Session (Apr 23rd)

- Dr. Mozley opened the call thanking Mr. O'Donnell and all committee members for their continued efforts in developing and refining the current CT Volumetry Advanced Disease Profile.
- This call was the 3rd and final ad hoc Profile Work Session, dedicated to addressing feedback received during the Profile Public Comment Period.
- The committee closed 167 comments from the public. The remaining issues were identified, set-aside, and documented within an "unresolved" comments section.

Next Steps:

- The post-comment Profile will be used to derive a new version of the QIBA Protocol proffered to UPICT. The timeline for creating the new protocol calls for its endorsement by the end of the face-to-face annual meeting this coming May (i.e., about 1 month).
- After April 23rd, the group will revert to a bi-weekly call schedule.
- The next call is scheduled for May 7th
 - UPICT Protocol
 - NIBIB contract
 - Plans to conduct ground work needed to support version 3 of the Advanced Disease Profile (in 2013 or 2014)
 - Process maps for creating new profiles of interest (e.g., small pulmonary masses)
